

This week we have managed to combine a lot of our individual effort into our application. I have been gaining more insight in the dependance between different parts of the code, and I have realized that it will always be hard to work simultanously and not make efforts that depend on each other. It has been very insightful to solve all of the merge-conflicts. This is something I want to understand even better through next sprint, and basically throughout the whole project.

This week I also managed to solve some code issues and add some new functionality. I also did some graphics. I've realized that I like working with the graphics, so for next sprint I hope to get back to doing more of that. I also look forward to fine-tuning the things we have before moving on to additional features.

Next week, my focus will return to the graphics and hopefully also refactoring some parts of the code.
